

Why LabCorp uses and trusts HGMD Professional

When a family has a child with a rare undiagnosed condition or a couple is planning their next chapter, they want assurance that their doctors are considering every peer-reviewed paper and all available evidence in their quest for an answer.

That's why LabCorp, one of the world's largest clinical lab networks, trusts and uses QIAGEN's Human Gene Mutation Database (HGMD®) Professional.

"Having access to the most comprehensive and up-to-date catalog of known mutations augments our existing variant classification expertise," says Dr. Marcia Eisenberg, Chief Scientific Officer of LabCorp. "This will allow us to continue to provide physicians and researchers with the best possible test interpretations, advancing LabCorp's mission to improve health and improve lives."

Labcorp currently has 36 clinical reference laboratories across the United States, serving hundreds of thousands of customers and healthcare providers each year. The company is using HGMD Professional across the network of laboratories to improve the identification and interpretation of genetic variants within inherited diseases.

"QIAGEN's HGMD provides us with access to curated, peer-reviewed evidence that will support more precise, comprehensive variant interpretation."

Dr. Stan Letovsky, Vice President of Data Sciences and Bioinformatics at LabCorp
